DieQua Corporation is a manufacturer and supplier of the widest range of gearboxes, gearheads and speed reducers, for power transmission and motion control applications, available from a single source. To assist our customers we strive to be an extension of their engineering team. With years of application experience throughout a broad spectrum of industries along with expertise in understanding the needs of a machine design, we are able to identify the desired design parameters allowing us to help select the optimal technology for the application performance requirements. Big or small, fast or slow, precise or general purpose, we either have the gearbox that fits your needs or know where you can find it.

Motion Control Solutions - There is a reason different gear technologies were developed. It's because each has a benefit for specific applications. That is why we offer so many more alternative solutions for motion control applications than other suppliers of servo gearheads. To provide the best technology to satisfy the need, DieQua has the largest selection of gearhead options and knows where and when to use them. By analyzing up to 36 different application characteristics, we are able to select the appropriate product for the job.

Power Transmission Solutions - Production, processing and material handling machinery require a variety of drive solutions to achieve the varying power, torque and speed requirements of their application. Having a supply partner that has all the options and knows how to apply them saves time and assures proper implementation of the technology. And with a variety of option and customization capabilities, unique solutions designed specifically for our customer's needs are something we provide every day.

So, whether you have one or several gear drive requirements, for standard or customized designs, DieQua Corporation is your one stop shop for gearbox selection, integration assistance and superior customer service.
